

Minor in Management of Aging Services

The Erickson School aims for innovation, and along with innovation comes collaboration. The fastest growing segment of the U.S. population are those age 85 and older. As the landscape of society changes, so increases the demand for specific knowledge throughout all occupations in order to address the particular needs of older adults. Coursework involves aging studies, policy and management, but further incorporates a well-established commitment to health, wellness, business, technology and more. Supported by more than a single discipline, the Management of Aging Services minor at UMBC provides a specialized overlay to any degree and equips future leaders with the tools necessary to accommodate adapting professions.
