

Congratulations to Galina Madjaroff!

We are pleased to announce that our very own Galina Madjaroff, M.A., is a recipient of a grant from the National Science Foundation. She will conduct research as a Co-Principal investigator on risks surrounding the security and privacy of adults with mild neurocognitive disorder (miNCD). In today's tech-centered world, when a patient cannot recognize a phishing scam or is unaware that their personal information is being compromised online, a caregiver steps in to work with them. However, caregivers face a plethora of issues regarding confidentiality and autonomy. Through identification of the current use of technology in these patients, development of a participatory design process, and testing of a prototype, Galina will uncover challenges in the technological field facing adults with miNCD, as well as offer further research opportunities for undergraduate and graduate students alike. This research will symbiotically benefit the topics discussed in Aging courses offered through the Erickson School. Congratulations!
